*for Your Food and Beverage Applications*

BIOENERGY LIFE SCIENCE, INC.

Re-imagining Ingredients for Healthier Living™

# Let's Innovate!

## Your Total Solution Provider

We're re-imagining the possibilities for plant-based foods, healthier foods and beverages! Great things can happen when you sharpen your competitive edge with Bioenergy Ribose® and RiaGev® because our patented ingredients do more, and they do it better. Consumers are more likely to notice the difference.

Bioenergy Ribose is THE go-to ingredient in a variety of plant-based products, food, beverages and snacks. Bioenergy Ribose is a healthy 5-carbon sugar that is used as an additive in the food industry to improve the taste and texture to a variety of applications. In addition, it can be added to processed foods for its nutritional and functional value, such as increasing energy, reducing muscle fatigue or increasing endurance and performance during exercise.

Bioenergy Ribose is a healthy, crucial sugar that increases cellular energy by enhancing the body's ability to make adenosine triphosphate (ATP), the source of all cellular energy.

Even those taking NR will be sold on our newest ingredient, RiaGev, the first and only commercially available, patented complex of Bioenergy Ribose and Nicotinamide. RiaGev uniquely increases NAD, ATP and glutathione production simultaneously, which has never been done before in a single ingredient solution. Science also shows RiaGev supports concentration and motivation. RiaGev is the next big thing in the healthy aging category and can be added to your next functional food and beverage application.

Let's partner to develop or refine your formulations and line extensions. BLS also has the skills to support your marketing and promotions.

Let's  
*Innovate!*

# Popular Categories and Applications

## Categories

Plant-Based

Low-Carb/Keto

Weight Management

Sports Nutrition

Gut Health

## Applications

Plant-Based Foods

Foods and Healthy Snacks

Beverages

Shakes/Meal Replacements

Let's  
*Innovate!*

# Competitive Advantages

Non-GMO Project Verified

Low Carb/Keto Friendly

Slightly Sweet Flavor Profile

Browning/Caramelizing Effect (popular for plant-based applications)

Negative Glycemic Value

Clean Label

Environmentally Friendly, Sustainable
